### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Arlene Powers on June 9, 2004.

The application has been amended as follows:

Please re-write claims 1, 2, 5 and 6 as follows:

1. (Currently Amended) A mobile vehicle having a compartment within which is an installation which comprises:

(a) a frame part having:

(i) first and second rigid, substantially L-shaped, frame side members respectively contained in laterally spaced parallel planes;

(ii) a frame first cross-member which bridges first corresponding limb portions, of said side members

(iii) a frame second cross-member which bridges second corresponding limb portions of said side members;

(b) means for securing said frame rigidly with respect to the vehicle body;

(c) a front wall panel member hingedly connected to said frame first cross-member;

(d) first and second side wall panel members respectively hingedly connected to said front wall panel member substantially at the edges thereof;

Art Unit: 3612

(e) a lid panel member hingedly connected to said second limb portions of said frame side wall members; and in which,

(f) ~~the several aforesaid parts (a)-(e) of said structure~~ are constructed, arranged and adapted such that the front and side wall panel members are respectively pivotal between a first configuration in which said front and side wall panel members are in a compact relationship and a second configuration in which they are fully erect;

(g) said lid panel member is pivotal about the hinge axis defined by its hinge connections with said second limb portions of said frame side members ~~such~~ so as, with said ~~fixed rear front~~ front wall panel and side wall panel members in the erect configuration, to effect closure of the an uncapped volume defined by said upstanding front and side wall panel members, thereby to constitute said a security chamber; and,

(h) said lid panel member incorporates means operative, with said lid panel member serving as the closure member for said uncapped volume, to lock the side wall panel members against movement about their hinge connections with the front wall panel member .

2. (Currently Amended) A vehicle as claimed in claim 1 in which: ~~the several~~ said members of said frame part are each of tubular form;

said panel members each comprise a metal panel part and, extending around a marginal zone of each said panel part, an endless sub-frame ~~composed~~ composed of tubular members to which the relevant metal panel part is substantially irremovably united, ~~as by welding~~; and,

said hinge connections are constituted as connections between said tubular members, ~~whether of said frame or of said sub-frames~~.

5. (Currently Amended) A vehicle as claimed in claim 2 in which:

Art Unit: 3612

the hinge connection between said lid panel member and said second limb portions of said frame side members are at locations intermediate the ends of said second limb portions, and said frame second cross-member is located at or in close proximity to, the free ends of said second limb portions, ~~there is a cross member~~ and is integral therewith.

6. (Currently Amended) A kit of parts ~~having the several constituent parts thereof~~ adapted and constructed ~~such so~~ as to enable said ~~constituent~~ parts to be assembled ~~such so~~ as to constitute an installation in a vehicle, being an installation as specified in claim 1.

2. The following is an examiner's statement of reasons for allowance: The primary reason for the allowance of claims 1-5 is that the prior art of record does not disclose or suggest a vehicle having a compartment within which is an installation with first and second L-shaped frame side members, a first cross member, a second cross member, a front wall panel pivotally connected to the first cross member, first and second side wall members hingedly connected to the front wall member and a lid panel member hingedly connected to the second limb portions of the frame side members wherein the front wall member and the side wall members pivot between a compact first position and an erect second position and the lid panel member acts as a closure for an uncapped volume created by the erect position of the front wall member and side wall members, in combination with the other elements recited. The primary reason for the allowance of claim 6 is that the prior art of record does not disclose a kit of part for an installation wherein the installation includes all of the limitations (parts a-h) of claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
